

Name INFRASTRUCTURE WORKS FOR FUTURE COAL LOADER
Client Port Waratah Coal Services

Project Description Daracon implemented environmental control measures as well as works which included clearing, stripping and site preparation for filling, preload foundation, fill and compact and concrete structures.

Site Location Kooragang Island

Value \$1.9 million

Duration March 06 – September 06

Referees Grant Lindner – 4915 3809

Key Personnel Project Manager – Allan Ball
Superintendent – Rex Palmer

Significant Achievements

- Kooragang Island had a number of very sensitive environmental aspects that required careful management
- Before construction could begin Daracon's personnel were involved in the careful adjustment of wetland habitat and the relocation of fauna that was threatened by the proposed work. This included snakes, frogs and birds that inhabited the site
- The site extended for 1.5 km but was only narrow and required complex traffic control to ensure that the convoy of incoming material was neither interrupted nor caused undue hazards
- Select material was sourced from a number of suppliers then processed through two of Daracon's pugmills to ensure consistency
- PWCS and Bechtel made safety of personnel their highest priority, believing that safe sites are the most productive. Daracon was chosen in part because of its similar commitment and performance

Extent of Involvement & Role of Proponent (S)

Daracon was the principle contractor on this project.
